Subject: GLYPHOSATE NSR
Date: Friday, May 12, 2017 3:01:17 PM

Dear Sirs and Madams,

Thank you for considering the important information that myself and many public citizens will provide you for consideration of the safe harbor levels of glyphosate.
Please take into consideration that chemical companies have invested billions in their products and have been shown to say anything to prolong their ability to sell their toxic chemicals and provide a profit to their shareholders. A mother's only special interest, however, is her family's well-being. And her community's health.
We must provide a safe future for our children or our country will be lost.

Please consider the links to scientific studies showing that at 0.1ppT glyphosate increased the growth of breast cancer cells.
<https://www.ncbi.nlm.nih.gov/pubmed/23756170>

At 0.1 ppB glyphosate destroyed the gut bacteria, which is where 70% of the immune system lies, destroying the body's ability to fight cancer.
http://d3n8a8pro7vhmx.cloudfront.net/yesmaam/pages/680/attachments/original/1393210354/Glyphosat_publication_Shehata_und_Kr%C3%BCger.pdf?1393210354

Glyphosate levels of 0.2-400 Part per MILLION are allowed on our food and feed crops. Glyphosate does not wash off. We ingest it. We absorb it through our skin when it is sprayed on our streets and playgrounds. Glyphosate accumulates in our bodies.

It is no wonder that our infertility is the highest in recorded history and 1 out of 2 of our children in America have a chronic illness.
Most disturbing is that 1 out of 2 males and 1 out of 3 females are EXPECTED to get cancer in America today and....we are spraying a carcinogen, glyphosate, ON OUR FOOD????

This simply does not make sense in the perspective of protecting the health of our citizens. It DOES make sense to the chemical companies which stand to profit from the sale of these chemicals.

I ask you to put the health and well-being of our fetuses, infants, babies, and children first.

Most ADI's are set for a 150-pound man. Not for fetuses.

One must consider that the EPA has studies which show that white shrimp died in toxicology studies Monsanto commissioned above 5.2ppm in 96 hours. Another study shows that glyphosate remains viable in dark salty water for 315 days. <http://www.sciencedirect.com/science/article/pii/S0025326X14000228>

What's in our womb? Dark salty water.

What is the size of a 6-week old fetus? The size of a shrimp.

The EPA allows 25 ppm of glyphosate on sugar.

Pregnant women often crave sugar.

Will your Safe Harbor Level put into consideration the fact that glyphosate has been shown to accumulate in bone marrow, breast milk and muscle tissue?
How will you know how much is accumulating in a fetus when a mother eats the most highly sprayed foods in the world - oatmeal, wheat, garbanzo beans, pinto beans, sugar and soy?

How do you know how much glyphosate a toddler is exposed to when he runs on the back yard brick patio his father sprayed with Roundup?

You won't be able to monitor that. You won't know if when the 18-month-old baby develops tumors and dies from cancer (which happened to my friend) if the exposure to glyphosate happened in the womb or in his yard.

You won't know if the boy that grows up to be sterile wasn't exposed to a few parts per trillion of glyphosate when he was developing in the womb.

[Glyphosate causes destruction to the testes](#). Do we want a sterile nation within a decade or two? That is what will happen if you do not take a courageous step to protect us.

The only solution to protect our fetuses and infants is to declare a zero safe level for glyphosate. Any product that contains any detectable amount MUST have a warning label for cancer.

Parents are simply not able to make an informed decision and protect their children without the integrity and honesty in labeling.

Please, take a stand for health. Set the level for required labeling to be anything over zero part per trillion for everyone, including fetuses.

Thank you.

Gratefully,

Zen Honeycutt
